

Worksheet - What is your Distributed Agile Team's Environment?

Introduction: Is your distributed agile team operating in a "sweet spot" or at an extreme? An extreme may be possible, but it could be challenging for your team to reach or maintain it.

Instructions (part 1): - As we discuss each principle, draw an X where your team is now on the spectrum for that principle.

Establish acceptable hours of overlap

Create transparency at all levels

Create a team culture of continuous improvement with experiments

Practice pervasive communication at all levels

Worksheet - What is your Distributed Agile Team's Environment?

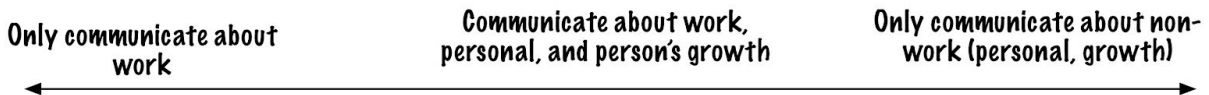

Assume good intention

Create a project rhythm

Create resilience with a holistic work/home/growth Culture

Default to collaborative work, not solo work

Instructions (part 2): - Now review each principle again and draw an O where you feel your team needs to be.

Note: Typically, the “sweet spot” for a distributed agile team is near the center of each of these levers, but it can vary somewhat from team to team. So consider each “circle” as your potential sweet spot.

For discussion: Is each sweet spot moving closer to or away from an extreme and how does that impact your distributed agile team? How might it impact your organization? How might you try to move your teams to their sweet spot based on what we discussed?
